Notes on connection diagrams

1. When using more than one item via a current transformer, inputs must be in series.
2. Auxiliary supply applies only if ordered. For maximum performance an AC or DC auxiliary is recommended. Self powering is achievable for a voltage variation of less than 20%.
3. When there is more than one output the outputs are in the sequence listed on the description, i.e. on a Watt, VAR and VA Transducer, output (a) is Watt, (b) is VAR and (c) is VA.
4. Where more than one output is provided there is no isolation between outputs. User may require a signal isolator (Module 250-ISA).
